Local Company to Build Kilgariff Headworks

Alice Springs Company Sitzler Brothers Pty Ltd has been announced as the successful tender for sewer and power headworks at the new suburb of Kilgariff.

Minister for Central Australia Karl Hampton said it was an important step in the growth of Alice Springs.

“I am pleased to announce today that Sitzler Constructions has been awarded the tender for stage one of the head works for Kilgariff,” Mr Hampton said.

“This $4.3m project will provide sewerage and power infrastructure for Alice Springs’ newest suburb, employing around 15 Territorians, five of whom will be trainees and five Indigenous.”

Sitzler will construct a sewer pump station and rising main between the proposed development site and the current sewerage treatment facility in Alice Springs.

The works form part one of a three-stage project, with road works and water supply to come.

“While this essential infrastructure lays the foundations, the community still has a big role to play in the shape of future growth in the centre,” Mr Hampton said.

“The Kilgariff Enquiry By Design Forum to be held next month will bring together the community and local and national experts to come up with some possible design scenarios for Kilgariff.

“While the Government continues to work with the community and experts on the revitalisation of the CBD and other projects, this forum will bring together people with a range of skills to specifically discuss Kilgariff.

“I encourage Centralians to be involved in shaping our great town, and attend the public sessions on offer.

“Together we can work to make Alice Springs an attractive and sustainable city.”

The forum will be held from 3 to 6 April.
