Confirm the VOR full of water?

Affirmative, it's okay but full of water.

Roger, standby.

While you are there KN, would you ask Regional Office would they have any requirement or would it be okay for me to depart now and another fellow coming on relieving me in an hour's time?

Standby.

(Call)

Copied all of your message and confirm you wish to be relieved and there will be a gap of one hour. Is that correct?

Affirmative. What will be your.... I presume you will be requested by Regional Office to standby throughout the whole for messages. What would be the best frequency for us to pick-up or exchange messages on in the middle of the night.

It is possible that this frequency will hold throughout the night. The only alternative would be 3460. 6575 may hold through.

Roger, thank you.

Are you aware....do you know who would be your relief or are you assuming you can get someone within an hour to come to the radio?

Negative. Arrangements have been made. I can get someone within an hour to come to the radio and attend to the radio. The only fellow we have available - the rest of them - we don't know whether they are alive and kicking or what's happened to them.

Roger, standby.

Selcall tones.

For your information, er I will remain open all night um, er if I can be of use er for any back-up and er of course I'm very anxious to hear about er my family. When you were talking to CLS the last time, was that the SOC you were talking to?

Er, negative, that was a er Connair pilot.

Okay.

Could you hold on for another 10 minutes?

Er, wilco, I'll be maintaining a constant listening watch. The SOC is the one who's going home.

Say again?

The SOC again. Er I presume you want me to stay for another 10 minutes, was it?

Confirm the Senior Ops Controller will be taking over the radio in 10 minutes?

Negative, will you confirm Adelaide Region require me to remain here for another 10 minutes prior to leaving?

Er affirmative, we're or there is some, another piece of information I think which we require. If there, so if you could hold on for another 10 minutes er, before shutting down and er advice before doing so.

Roger, wilco, and say again the frequency we will use as best night time comms?

This frequency may hold through the night with assistance from other stations, however, if it does not, 3460 would be th secondary.

Oh, roger, we may be able to use this frequency okay; we've got a er, a HF transmitter which we can tune up to those frequencies.

(Ack)
