**Police hunt for driver after fatal hit and run**

A MAN has been killed in a suspected hit-and-run on the Stuart Highway near Tennant Creek.

Duty Superintendent Bob Harrison said police received a call about the "fatal motor vehicle accident" yesterday just before 9am.

Detective Superintendent Brent Warren, from the southern Investigations Division, said the incident took place on the Stuart Highway about 12km north of Threeways Roadhouse.

"Sometime between late last night and early this morning the male pedestrian has been struck by a vehicle, which has left the scene," Sgt Warren said.

"Police, including officers from the Alice Springs Major Crash Investigation Unit and Detectives from Tennant Creek are currently investigating the circumstances surrounding the incident."

The crash site on the Stuart Highway was yesterday blocked off as investigations were under way.

A file will be prepared for the Coroner.

The road toll now stands at 37 for this year, compared with 34 for the same time last year.

Police urge anyone who may have any information as to the car or driver involved to contact Police on 13 444 or call Crime Stoppers on 131 444.

**Cane toad man’s new best friend**

**By MICHELLE COLLINS**

TERRITORIES want to say goodbye to cane toads.

"The cane toad has been a thorn in our side for far too long," said Dr Nigel Turvey, environmental researcher and author of 'Cane Toads: A tale of survival, politics and flawed science.'

"The cane toad is a large, aggressive, heat-seeking predator, which can cause significant damage to ecosystems and human infrastructure."

But are there any benefits to the cane toad? Some experts believe so.

"The cane toad can provide valuable data on the effects of invasive species on local ecosystems," said Dr Turvey.

"By studying the cane toad, we can gain a better understanding of how invasive species impact the environment and inform strategies for managing them."
